📁 Portfolio

PROFESSIONAL SUMMARY

AI Engineer with 3.5 years of experience building production-oriented GenAI, agentic AI, data, cloud, and DevOps solutions. Experienced in enterprise AI platforms using locally hosted LLMs, RAG over internal documents, vector search with Qdrant, Pinecone, and pgvector, FastAPI-based services, authentication workflows, cloud deployment, Docker-based containerization, and CI/CD-oriented automation. Built AI solutions for clinical-trial recommendation, pharmacopeia comparison, BI report validation, Databricks data pipelines, analytical applications, and agent-assisted software-development workflows.

CORE TECHNICAL SKILLS

Languages & Databases: Python, SQL, PostgreSQL, Database Management

AI / Agentic AI: AI Agents, Multi-Agent Systems, PydanticAI, LangGraph, LLM Applications, AI Prototyping, OCR

AI Development Tools: Claude Code, Codex, n8n, Custom Agentic Software Development Workflows

Frameworks: FastAPI, Streamlit, Dash

Vector Databases: Qdrant, Pinecone, pgvector

BI & Analytics: Tableau, Power BI, Data Analytics, BI Report Validation

Data Engineering: Databricks, Data Pipelines, Data Synchronization, Data Lake

AWS: EC2, S3, Lambda, Amazon Bedrock, Elastic Load Balancing, Cognito, RDS, DynamoDB, ElastiCache

Azure: Virtual Machines, Blob Storage, Azure Functions, Azure AI / OpenAI, Load Balancer, Entra ID, Azure SQL, Cosmos DB, Azure Cache for Redis, Microsoft Authenticator

DevOps and platform engineering: Docker, containerization, Docker image build, deployment automation, shell scripting, CI/CD workflows, API gateway integration, monitoring readiness, GPU-based inference readiness, and security-aware deployment practices

Frontend: React, Tailwind CSS

PROFESSIONAL EXPERIENCE

AI Engineer | AI / Data / Cloud / DevOps

3.5 Years

- Designed and developed enterprise GenAI and multi-agent solutions for intelligent workflow automation, recommendation, document processing, retrieval-augmented generation, data processing, and software-engineering workflows.
- Built an AI-powered clinical-trial recommendation tool for doctors and research professionals to identify and evaluate relevant clinical-trial information.
- Built an AI agent solution for pharmacopeia analysis using OCR to read pharmacopeias from different countries and provide comparison results for a specific test, helping research professionals prepare accurate, error-free drafts.
- Developed custom agentic software-development workflows using Claude Code and Codex, with custom skills and orchestration across development, testing, deployment, and pull-request creation with human approval.
- Built FirstMate, a custom multi-agent software-development tool that communicates with multiple Codex and Claude Code agents and coordinates development, testing, deployment, and PR workflows.
- Used n8n for faster prototyping and workflow automation while developing AI solutions.
- Built a BI Report Validator Tool for Tableau and Power BI UAT and production validation. use of integrated connectors to retrieve real report data and execute validation pipelines according to configured schedules.
- Worked with Databricks to build data pipelines, data synchronization workflows, and data-lake solutions.
- Built analytical applications using Dash for interactive data analysis and visualization.
- Worked across AWS services including EC2, S3, Lambda, Amazon Bedrock, Elastic Load Balancing, Cognito, RDS, DynamoDB, and ElastiCache.
- Worked with Azure cloud services and integrated Microsoft Authenticator for authentication and MFA workflows.
- Handled deployment and DevOps activities using shell scripting and Docker, including containerisation and building Docker images.
- Developed API and application components using FastAPI, Streamlit, PydanticAI, and LangGraph, with experience using Qdrant, Pinecone, and pgvector for vector search and retrieval use cases.
- Worked on frontend development using React and Tailwind CSS for AI and analytical applications.

AI & DATA PROJECTS

Enterprise GenAI Platform Proof of Concept | Kubernetes / Locally Hosted LLMs / RAG

- Designed a proof-of-concept architecture for an enterprise GenAI platform using Kubernetes-based deployment patterns, locally hosted LLM inference, RAG over internal documents, vector search, API gateway integration, authentication, monitoring, CI/CD automation, GPU-based inference readiness, and security controls.

AI-Powered Clinical-Trial Recommendation Tool | Agentic AI

- Built an AI tool that provides clinical-trial recommendations for doctors and research professionals, supporting faster clinical-trial discovery and recommendation workflows.
- Designed agent-based workflows to process user requirements and return relevant recommendation results.

AI Agent for Pharmacopeia Comparison | AI / OCR / Research / Multi-agent

- Built an AI solution using OCR to read pharmacopeias from different countries and compare results for a specific test requested by the user.
- Designed the workflow to help research professionals identify differences across country-specific pharmacopeias and prepare more accurate, error-free drafts.

Multi-Agent Software Development Platform - FirstMate | Claude Code / Codex

- Built a custom multi-agent solution that communicates with multiple Codex and Claude Code agents and coordinates software-development tasks.
- Created agent skills and orchestration covering development, testing, deployment and automated pull-request creation, while retaining human approval before the PR is raised.

BI Report Validator Tool | Tableau / Power BI / Automation

- Built a validation tool for Tableau and Power BI reports across UAT and production environments.
- Integrated connectors that retrieve real report data and execute validation pipelines according to schedules, enabling repeatable automated report validation.

Databricks Data Engineering Solutions | Databricks / Data Lake

- Built Databricks pipelines for data processing and synchronization and worked with data-lake based data processing workflows.

Analytical Tool using Dash | Python / Analytics

- Built an interactive analytical application using Dash for data exploration, analysis and visualization.

Cookie Validation Automation Tool | Automated Validation

- Built automation tooling to validate cookies and support repeatable web validation and testing workflows.

EARLIER INTERNSHIP

MResult | DevOps Engineer Trainee

2023

- Completed a DevOps Engineer Trainee internship, gaining practical exposure to DevOps-oriented engineering workflows.

RECOGNITION & AWARDS

- Received Pat on the Back award twice in the current organization for contribution and delivery excellence.
- Recently received a Bravo Award for outstanding contribution and delivery excellence in AI projects

EDUCATION

Alva's Institute of Engineering and Technology, Mangalore

Aug 2019 - Jun 2023

B.E. / B.Tech, Electronics and Communication Engineering | 8.78 CGPA

Alva's Pre-University College, Mangalore

Mar 2017 - Mar 2019

12th (Karnataka PU Board), PCMB | 75.83%

D C Memorial Comp High School

Sep 2016 - Apr 2017

10th (Karnataka Secondary Education Board) | 89.92%

CERTIFICATIONS

NPTEL - Microprocessors & Microcontroller | Embedded Systems Internship Certificate

Robotic Process Automation Certification in association with UiPath | Career Edge - Knockdown the Lockdown, TCS iON
